Tire Manufacturing Adhesives— For over 35 years, Corson Rubber Products, Inc. has supplied to the tire manufacturing industry a product known as Drumstick Cement which is used in the building of automobile, truck, off the road and agricultural tires. Initially Corson Rubber Products sold its Drumstick Cement domestically, however in recent years the decision was made to offer our adhesive product worldwide. Drumstick Cement is currently being sold in North America, Central America, South America, Europe, Africa, Asia, Australia and The Netherlands.

Whether you are currently buying or making cement for your operation, it will pay you to contact Corson Rubber Products, Inc. and try our Drumstick Cement. Some of the benefits you'll get from using this product are:

- **Time & Labor Savings** - Our Drumstick Cement eliminates cement house setups and cleanups.
- **Greater Tire Throughput** - Faster tire building, fewer rejects. Controlled tack and hardness levels for auto, truck, off the road, and agricultural tires.
- **Safety Benefits** - Since no solvents are used in the manufacturing of our Drumstick Cement, solvent related hazards are eliminated.
- **Improved Use of your Space** - By outsourcing your cement needs you reduce the need to store multiple raw materials.
- **Improved Housekeeping** - Our Drumstick Cement is a solid, not a liquid, therefore there are no messy liquid spills to cleanup.
- **Proven Reliability and Quality** - Corson Rubber Products has over 35 years on the job experience throughout the world with tire manufacturing adhesives. Put our experience to work for you!

Corson Rubber Products offers eight (8) standard compounds covering a broad range of tack and hardness/stiffness.

Our most widely used formulation is our 211-P. This is a regular tack and regular hardness. While this formulation may be used for a wide variety of tire types and sizes, for larger (i.e., earthmover, heavy truck aircraft, etc.) some of our customers prefer a harder, high tack compound. Our customers who use our material for radial tires most often use the V-965-70 DURO.

We have a formulation that will meet your needs!

DRUMSTICK TABLE		TACK		
		LOW	REGULAR	HIGH
H A R D N E S	VERY LOW	ô	120-GS 30 DURO	ô
	LOW	—	150-G 40 DURO	—
	REGULAR	ô	211-P 50 DURO	
	HIGH	F-950 60 DURO	F-900-M 60 DURO	V-900-V 60 DURO
	VERY HIGH		—	V-965-V 70 DURO

Corson Rubber Products, Inc. was founded in 1939.

We specialize in drumstick cement, custom molded and extruded rubber products.
